Art Unit: 2124

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13 and 30-37 are, drawn to a method / apparatus configured to generate M random output numbers, classified in class 708, subclass 250+.
 - II. Claims 14-29 and 38 are, drawn to a method / apparatus for generating a noise function output, classified in class 708, subclass 300+.

2. The inventions are distinct, each from the other because:

Each group of claims is directed to a separate invention. It is noted that the groups maybe belong to a system. However, this is not sufficient to prevent a restriction requirement.

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because subcombination is not essential to combination, i.e., independent claims 14 & 38 [of Group II "combination"] do NOT recite the detail features of independent claims 1 & 30 [of Group I "subcombination"]. The subcombination has separate utility such as a random number generator.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
